LOCATED IN THE EAST
INDONESIA / WEST
PAPUA REGION,
THIS SPECTACULAR
TRIP IS PERFECTLY
SITUATED WITHIN THE
CORAL TRIANGLE –

HOME TO THE HIGHEST KNOWN
CONCENTRATION OF MARINE LIFE
ON EARTH.

Also known as the “Four Kings,” Raja Ampat’s 1500 small islands possess unfathomable mystery, with only 35 islands being inhabited. The region’s oceans are famed for their diversity, becoming a dream destination for avid divers.

With a vast ecology being recently uncovered, the volume of species endemic to this part of the world makes Raja Ampat a top priority for marine conservation.

The waters contain 80 percent of all the world’s coral species (10 times the amount found in the entire Caribbean).

THE SCIENCE *of* SERVICE

VOLUNTEER, RESEARCH, TEACH

HOME TO 1350 SPECIES OF FISH, 6 OF THE WORLD'S 7 SEA TURTLE SPECIES, AND 27 VARIETIES OF MARINE MAMMAL, THIS REGION FEATURES UNPARALLELED DIVERSITY.

THE HEALTH OF THE WORLD'S MARINE ECOSYSTEM IS DIRECTLY AFFECTED BY RAJA AMPAT.

WITH MUCH OF THESE WATERS CLASSIFIED AS PROTECTED MARINE AREAS, IT IS VITAL TO CONTINUE PROTECTING THE REEFS FROM CORAL BLEACHING & DISEASE.

Despite the impact of climate change & pollution affecting today's oceans, reefs in Raja Ampat have shown remarkable resistance to such threats.

Through data gathering & mapping these coastal biospheres, you will be assisting the project staff, relaying valuable information and data to local governments and communities, in order to protect the reefs. You will help the local school children to learn basic English—a valuable skill that could provide better futures for the children, and for their communities.
